All devices have to pass a strict test procedure during all steps of production. On demand, SCHAEFER can also provide additional customer specified tests in cooperation with external test laboratories.
The manufacturer reserves the right to deviate from technical details given.
**Workforce**

SCHAEFER is wholly owned and privately run by a qualified and experienced team of experts. SCHAEFER has grown in a controlled and sustainable manner to a dedicated workforce of over 200 people who oversee the entire concept, design, control and manufacture of all of the SCHAEFER Product Portfolio.

Stemming from more than 40 years experience, which dates back to the founding days of the company, SCHAEFER Personnel can tap into a rich resource of our internal intellectual property which can only be gained from designing and manufacturing solutions after detailed and in-depth consultation with clients.

**Products**

The level of in-depth engineering which has occurred from working very closely with our clients has allowed our Product Portfolio to be expanded to include:

- DC / DC Converters
- AC / DC Rectifiers & Battery Chargers
- DC / AC Inverters – single & three phase
- AC / AC Frequency Converters - single & three phase
- Electronic By-pass switches
- DC & AC UPS systems
- THYRISTOR Controlled Power Supplies & Battery Chargers
- Control and monitoring systems integrated and stand alone.
Manufacture

Immediate proximity also generates the free flowing information path (the production and development areas) along with the testing and customer support areas being all under the same roof. This enhances the SCHAEFER Team's ability to react to exacting demands efficiently. Fruits of this labor are to be seen throughout the world, in a variety of fields such as:

- Rail & Automotive Industry
- Power Generation Industry
- Oil & Gas Industry
- Chemical Industry
- Factory Automation
- Military Industry

Whether on-board or trackside, on-shore or off-shore, stationary or mobile, land, air or marine based, a system component or complete system, environmentally hazardous area, corrosive or simply industrial, there is a SCHAEFER Power solution to fit your requirements.

Welcoming the challenge, the SCHAEFER Team offers the highest level of quality, engineering and support.
Switchmode Power Supplies

DC/DC Converters, AC/DC Rectifiers & Chargers

- **DC Input voltage**: DC/DC converters from 10 - 800V DC (Custom configurations to 1000’s of volts)
- **AC Input voltage**: AC/DC rectifiers 115 / 230V AC, single phase (with or without PFC) or 208 / 400 / 480V AC, three phases
- **Output voltage**: up to 800V DC, (Custom configurations to 1000's of volts) additional outputs 5 / 12 / 15 / 24V DC upon request
- **Output current**: up to 450A / module
- **Output power**: 50W - 40kW / module

**Features**
- Continuous short circuit protection
- Overvoltage protection
- Thermal shutdown with auto-restart
- Operational from – 40 to +75 °C
- Industrial grade components
- Compact and robust design

**Options**

**Input**
- Inrush current limiting
- Automatic selection of 115/230V AC input
- Power factor correction for single phase input
- DC Input polarity protection

**Output**
- Remote on / off (inhibit)
- Output decoupling diode for redundant / parallel operation
- Active current sharing for parallel operation
- Automatic/manual selection of charging characteristic
- Temperature compensated charging voltage

**General**
- Output programmable via analog signal
- Monitoring of input and output voltage
- RS232 or IEEE488 interface
- Wall mount, chassis mount or DIN rail mount
- Increased mechanical strength
- Tropical protection

Switchmode Inverters, 1 or 3-Phase Output

DC/AC Inverters, AC/AC Frequency Converters & UPS

- **Input voltage:** 10 - 800V DC or 115 / 230V AC, single phase, 47 - 400Hz or 208 / 400 / 480V AC, three phases, 47 - 400Hz
- **Output voltage:** 115 / 230 V AC, single phase or 208 / 400 / 480V AC, three phases
- **Output frequency:** 50 / 60 / 400 / 800Hz (crystal stabilized) or programmable within 40 - 400Hz or 400 - 800Hz
- **Output power:** 200VA - 45kVA

**Features**
- Sine Wave
- Continuous short circuit protection
- Thermal shutdown with auto-restart for inverters >1kVA
- Suitable for complex loads
- Surge power capability
- Industrial grade components
- Compact and robust design
- Output parallel operation

**Additional features for 3-Phase Output**
- Unsymmetrical load permissible
- Modular system with interchangeable inverters

**Inverters or Frequency Converters with 1-Phase Output**

Mechanics and Accessories

Standard

Plug-in module for 19" sub-rack with natural convection

The standard modules are typically equipped with one or two H15 connectors at the rear. For currents > 50 A “high current connectors” are used. For inverters with a transformer at the output a F24H7 connector is fitted in addition to the H15 connector and for static switches a F48 connector is fitted in addition to the H15 connector. All these modules are designed for insertion into a 19" sub-rack.

High power module with fan cooling

The high power modules are constructed in 19" format, having a terminal block at the rear. Depending on the current, bolts or bars may also be available for connection. Typically, these modules are cooled through air supply entering below and exiting above (see photo), with the exception of some modules whose airflow is from front to back.

High power module with liquid cooling

High power modules with liquid cooling are also constructed in 19" format, having bolts or bars and eventually Sub D connectors at the rear. The connections for the liquid inlet / outlet are also located at the rear.

Options

**w** wall mount

Modules, which have the wall mount option, are typically fixed to a structure or within a cabinet. Depending on the size of the module, this may be done with a flat or angled plate (see photo). The load connections are typically a terminal block. Should the application not require a pluggable module / rack solution, wall mounting presents an alternative for the customer to choose from.

**cha** chassis mount

Module is designed for installation to a structure or within a cabinet. Screw type mating connectors are supplied with the module. Due to the limited number of connector pins this option is not available for modules with dual AC input or for multi-output converters with output 4 supplying more than 10 A.

**din** DIN rail mount

Module is designed for DIN rail mounting to a structure or within a cabinet. Screw type mating connectors are supplied with the module. Due to the limited number of connector pins this option is not available for modules with dual AC input or for multi-output converters with output 4 supplying more than 10 A.
19” Sub-Racks

As standard, all of the modules are designed and manufactured for insertion into 19” sub-racks. Higher power modules are already constructed in 19” format.

19” sub-racks can be configured as 3U, 5U or 6U allowing any mix of units and can be upgraded in accordance with the customers’ requirements, e.g.

- Mating connectors wired to a terminal block
- Fuses or circuit breakers
- Hot swappable configuration upon request
- Analog or digital meters
- Switches
- Fans
- Filters
- Decoupling diodes
- Provisions for keying the modules to ensure module / slot designation

Alternatively, the racks can be provided in 23” format. Furthermore the complete system can be installed in a cabinet.
Design Solutions - Rail & Automotive

Hybrid Vehicle DC Power System

- Completely autonomous design, turn key solution
- Protection category IP65
- Stainless steel enclosure
- Underfloor mounting
- Natural convection
- Increased mechanical strength
- Designed for high DC input voltage

Rolling Stock Mounted Inverter, IP66

- Client specific interface connection
- Anchored to the RAIL Car floor
- 600mm × 600mm foot print
- Impervious to both impulses and spikes across the input, this module delivers the full output range with a crest factor of 3, up to +75°C environmental temperature
- Full power ability, across a phase shifted load, capacitive & inductive load tolerant of ± 0.7\( \cos \phi \)

40kW On-board Power Supply System

- Multi input/ Multi output system
- Hermetically sealed enclosure
- Controlled air management
- Battery charger & DC Bus supply
- Challenging environmental specifications
- Engineered for high degree of shock & vibration
- Self-protecting, autonomous assessment of thermal and electrical parameters
Coolant System Control for Reactor

- KTA 3507 certified
- Integrated switch mode power supply
- Reactor Core temperature evaluation
- High level of reliability, redundant fault tolerant capability
- 19” Rack mechanical solution
- Enhanced mechanical design
- Programmable output parameters through the client interface

Power Supply Modules for Substations

- Fault tolerant power configuration
- Automated interrupt free by-pass operation
- Stabilized load feed
- Expandable to multiple redundant design
- Hot-pluggable
- Multiple mechanical solutions and styles

N+2 UPS System

- Configured both dual redundant & fault tolerant
- Supplied from multiple independent DC and an AC source
- Both automatically and manually operational by-pass system
- Integrated & isolated AC by-pass
- The indication panel reflects the operational status, while multiple stage monitoring is both locally and remotely communicated.
Subsea Power Supply

- Module based on a C3700 standard unit
- Extreme Environmental Challenges
- Wide range of AC input supply
- Robust heat sink plate to integrate into the subsea bell / tube
- Enhanced mechanical integration
- High level of reliability

Power Supply for Off-shore Oil & Gas Industry

- 15kW liquid cooled power supply system
- Dimensions: 5U × 19" × 600mm (H x W x D)
- Redundant fault tolerant capability
- High efficiency through ZVS topology
- Assisting the industry in the search for mineral resources

40kW Liquid cooled Power Supply

- For semiconductor manufacturing industry
- Highly demanding environment
- Extreme load variations
- Transfer of thermal energy into a fluid for heat exchange re-capture
- Programmable output parameters through the client interface.
### On-board Military UPS

- Military grade design
- Integrated Inverter, Static Switch and Battery Charger
- Dimensions: 6U × 19" × 500mm (H x W x D)
- Robust and reliable design

### On-board 3-D Radar Power Supply

- 5kW Modules ensuring a high power density
- Flexible orientation
- Capable of populating a 5U RACK with three units
- Capable of populating a 3U RACK with two units
- Engineered for high degree of shock & vibration

### Integrated combined solution

- Multiple source power conversion system
- Adjustable extraction power
- Synchronized output with specialized frequency
- Pluggable system, installation on water heat sinks via pressure rails
- Communication via EtherCat (PC-generator)
